Repository Information

Repository's URL: <https://github.com/NickFishman04/waph.git>

This is a private repository for Nick Fishman to store all code from the course.
The organization of this repository is as follows.

Individual Project 1

Overview

For this project I built and deployed a profile website on GitHub Pages with my resume info and a second page covering the WAPH course and its

labs/hackathons/projects. It builds on Lab 2, using Bootstrap, jQuery, two public APIs, a digital and analog clock, a show/hide email feature, and local storage to track returning visitors.

General Requirements

Profile Page (index.html) The homepage uses Bootstrap and includes my headshot, contact info, education, work experience, and skills list, along with a link to the WAPH course page.

WAPH Course Page (waph.html) This page gives a short overview of the course and lists the labs, hackathons, and projects, with a link back to the homepage.

Non-Technical Requirements

CSS Framework Both pages use Bootstrap via CDN for layout and styling.

Page Tracker Added a page tracker to track visitor traffic.

Technical Requirements

JavaScript/jQuery

- **Digital Clock:** Updates every second using jQuery and `setInterval`.
- **Analog Clock:** Drawn with Canvas, redrawing the hands each second.
- **Show/Hide Email:** Toggled with a button using jQuery.
- **Show/Hide Bio:** A second button reveals a bio with `.slideToggle()`.
- **Click Me! Button (extra feature):** Opens a rick roll.

Public API Integration

- **jokeAPI:** Pulls a random joke on load and every 60 seconds, with a disclaimer about third-party content.
- **Dog CEO API:** Pulls a random dog image, also with a disclaimer.

Visitor Tracking with Local Storage Uses local storage to show a first-visit message or a “welcome back” message with the last visit’s date/time, updating it on each load.

Labs

Hands-on exercises in lectures

- Lab 0: Development Environment Setup
- Lab 1: Foundations of the Web
- Lab 2: Front-end Web Development

Hackations

- Hackathon 1: Cross-site Scripting Attacks and Defenses

Individual Projects

- Individual Project 1: Professional Profile Website and API Integration
